IMPORTANT NOTICE

The purpose of this Whitepaper is to present Almeela and the related Almeela Ecosystem to potential customers in connection with the proposed ICO. The information set forth below may not be exhaustive and does not imply any elements of a contractual relationship. Its sole purpose is to provide relevant and reasonable information to potential purchasers of the Almeela for them to determine whether to undertake a thorough analysis of the Almeela, the Almeela Ecosystem and the companies belonging to it with the intent of purchasing the Almeela. Nothing in this Whitepaper shall be deemed to constitute a prospectus of any sort or a solicitation for investment, nor does it in any way pertain to an offering or a solicitation of an offer to buy any securities in any jurisdiction. This document is not composed in accordance with, and is not subject to, laws or regulations of any jurisdiction, which are designed to protect investors.

IMPORTANT NOTICE

This Whitepaper does not constitute or form part of any opinion on any advice to sell, or any solicitation of any offer by the seller of the Almeela (the "Almeela Provider") to purchase any Almeela, nor shall it, or any part of it, nor the fact of its presentation form the basis of or be relied upon in connection with any contract or investment decision. It has not been registered under the Securities Act or any other securities laws of any state of the United States or the securities laws of any other country, including the securities laws of any jurisdiction in which a potential coin holder is a resident. No regulatory authority has examined or approved of any of the information set out in this Whitepaper. No such action has been or will be taken under the laws, regulatory requirements or rules of any jurisdiction. The publication, distribution or dissemination of this Whitepaper does not imply that the applicable laws, regulatory requirements or rules have been complied with. The Almeela cannot be used for any purposes other than those provided in this Whitepaper. The Almeela is not intended for sale or use in any jurisdiction where sale or use of digital tokens may be prohibited.

IMPORTANT NOTICE

The Almeela confers no other rights in any form, including but not limited to, any ownership, distribution (including but not limited to profit), redemption, liquidation, proprietary (including all forms of intellectual property), or other financial or legal rights, other than those specifically described in this Whitepaper. Certain statements, estimates and financial information contained in this Whitepaper constitute forward-looking statements or information. Such forward-looking statements or information involve known and unknown risks and uncertainties, which may cause actual events or results to differ materially from the estimates or the results implied or expressed in such forward-looking statements. This Whitepaper can be modified to provide more detailed information.

This English language Whitepaper is the primary official source of information about the Almeela. The information contained herein may from time to time be translated into other languages or used during written or verbal communications with existing and prospective customers, partners etc. During such translation or communication, some of the information contained herein may be lost, corrupted, or misrepresented. The accuracy of such alternative communications cannot be guaranteed. In the event of any conflicts or inconsistencies between such translations and communications and this official English language Whitepaper, the provisions of this English language original document shall prevail.

MONEYFESTO

Banking is the art of being the creditor, although could be able to sell the non-existing one to the persons more than one. The integration of cryptographic technology into the banking system, without eliminating the disruptions in the existing banking system, cannot make any contribution other than the quick borrowing of the people in the borrower-based money system and the formation of new financial bubbles. For that reason, it is important to first identify these disruptions and provide solutions to those disruptions.

After eliminating these disruptions, "The Natural Selection of Money" will take place and the real growth will take the place of artificial economic growth which is based on debt. The current economic system will return to its natural process again. The savings will be realized within the production process instead of deposit money - loan swirlthat entered into a wicked-circle in the closed banking system.

The flat foreign exchange idea used today is made up of the idea that it is a check or a dollar against gold. Over the time, any foreign currency has never protected its value. The reason for that is whenever the Central Bank is to issue money the money in our pockets lose value, so we call it as inflation.

MONEYFESTO

After years of inflation, over-indebted markets and financial regimes that were not regulated irresponsibly caused terrible problems (2008 Mortgage Crisis). This crisis, at the same time, has begun to be the beginning of a major financial evolution. Crypto exchange was born. The crypto Exchange is the idea of creating a new foreign exchange where the gold principles that are not dependent on inflation are valid and the supply and demand determine the value. It has emerged as a reaction to the disruptions in the current financial system. The usage of crypto-money, which arises as a reaction to the existing system, without removing the disruptions which caused this reaction is against the nature of "Blockchain Technology". reason for that is whenever the Central Bank is to issue money the money in our pockets lose value, so we call it as inflation.

Today, the value of paper money is only the value of paper and ink. It is called price-money (nominal money). Namely, the value on paper money is an existing value as only the government or laws say so, and it does not backed by any gold. The value of money is equivalent to the reputation of states (political and military power) in the global economic system.

MONEYFESTO

Fiat currencies have failed as a store of value. The US dollar has lost approximately 97% of its purchasing power in relation to gold in the nearly 50 years since the United States went off the gold standard in 1971 (LBMA, 2018). The euro has lost over 75% of its value on a gold basis since the single European currency debuted in 1999 (LBMA, 2018). No fiat currency has maintained its value against gold in the long-run.

Partial Reserve System; It is the only system that artificially allows for the loan - deposit money loop among the banks, and allows for the more than one banks to grant loans (ie, creating the money for jam) through the deposit money deposited to only one bank, and that aims the savings stay within the closed banking system instead of sliding into the real sector, and with which you will never be arrested in the world in any way although you sell the thing to several customers.

The banks deposit unearned money by granting loans. For instance, a factory is built with this credit. At that, according to the fact that a person who does not have money makes a factory to himself, to whom that factory does belong to? Does it belong to that person? Does it belong to the Bank? Does it belong to the Nation? Or, does it belong to the State? Whereas it is the state's reputation that determines the value of paper money.

MONEYFESTO

How can the value of money be determined in an economic system where the authority to issue money cannot be determined? A state that cannot issue its own money loses its authority by becoming indebted. Whoever issues the money then it is the State.

The banking system plays a leading role in all economic crisis in the world. When we look at the economic crisis of 1929 and the mortgage crisis of 2008, the main reason for the crisis is the financial bubbles that are formed in the markets.

As the financial bubbles that grew on the basis of bank loans continued to swell from one side, securities and securitized products continued to rise to the extent that they find the new buyers, that is, to the extent the banks could grant new loans. As the number of new buyers decreases due to the increase in prices, the lending rate of the banks is also decreasing. When the banks lose their lending ability, the artificial system that allows the credit wheel to spin is clogged and the financial crises are artificially revealed by the banks again.

MONEYFESTO

Let's explore the banking scam none of us have ever been taught anything about money the reason is to prevent us from learning the truth that money is a trick and money is a trap. When solving any crime there's a universal truth follow the money but with the banking scam follow it backwards where does money come from. The world's money supply is always growing where does all the new money keep coming from. Money comes from privately controlled global banks like the Federal Reserve System. They create money every day which increases the world's money supply. Because all banks are either owned or controlled by private bankers. The real question is how do private bankers create new money ? And the answer is they create it out of thin air. Bankers create money out of nothing they make it up it is a fiction. Godlike power to create something of value and nothing a stroke of a keyboard and money isn't is created in fact only 3% of the world's money is even in the form of bills and coins which means 97% of all money in the world is just numbers typed on a computer screen. This is part one of the banking scam money is created out of nothing.

MONEYFESTO

The second part of the scam is this phony money is issued as debt. what is that exactly well when you consider. We work our whole lives to pay it off, you could say debt is slavery but who's debt is this phony Money? It's our debt all of it, it's our debt when we use credit cards We get student loans borrow money for mortgages all bank borrowing and it's our debt again when the government borrows which is each and every day. In today's world money is debt and debt is money and don't forget the interest charges money equals debt and debt equals slavery therefore money equals slavery. Our monetary system is a carefully concealed system of slavery, why? Because our government can create the same money for free with no interest charges just like they used to as the founding fathers designed it inside the States Constitution for our protection against private bankers.

The third part of the banking scam is very evil; when bankers create money from nothing an issue of his debt they only create the principal portion of the debt. They do not create the money for the future interest payments there is not enough money in existence for all of us to make our interest payments. Infact our money creation system is even mathematically impossible, money issued by the bank's principal that does not equal the money demanded back to the bank's principal plus interest.

MONEYFESTO

We are forced to play a game of musical chairs to see who can make their debt repayments this guarantees a world of bankruptcy competition and scarcity of Money.

For example we go to the bank to borrow money for a house let's say a hundred thousand dollars the moment we sign the loan document the bank creates the money out of thin air. A hundred thousand dollar debit gets registered for us and a hundred thousand dollars secured to credit for them, then one of two things happens either.

We give the bank 30 years of labor making house payments totaling three hundred thousand for the original one hundred thousand we borrowed or the bank takes our house. The bankers get either our labor for life or our house and often they get both all from money created out of thin air and issued as debt for money made out of nothing. This is why all the bankers end up with all the assets.

MONEYFESTO

The fourth part of the banking scam is inflation. People think inflation is prices and costs increase. A better answer might be the value of our money always goes down inflation is created every time the central Bank's print money which is every day. where does all this new money get its value ? The answer is it steals its value from the existing money supply where our savings are. Our savings are disappearing because of the new money they're printing. If money creation was imbalanced with goods and services, there would be no inflation. Prices would stay the same but the reality is banks always print money driving prices ever higher which steals the value of our savings making them disappear. Since the private bankers created the Private Federal Reserve in 1913 the United States dollar has lost 97 cents in purchasing power. An item in 1913 that costs \$100, in 2011 costs 2230 a price increase of 2130 percent. This is the banking scam. There is no money created for the future interest payments and inflation steals our savings every day in order for the banking scam to be pulled over our eyes the bankers need help from the likes of paid for politicians and appointed civil servants, Military-industrial complex mainstream media multinational corporations and the bankers good buddies

MONEYFESTO

There is no money created for the future interest payments and inflation steals our savings every day in order for the banking scam to be pulled over our eyes the bankers need help from the likes of paid for politicians and appointed civil servants, Military-industrial complex mainstream media multinational corporations and the bankers good buddies For example; what do our banker controlled television networks say about criminal bankers ? Oh bankers are our saviors!! Chairman is Man of the Year, He saved the World. Bankers really do deserve their bonuses. They're so smart and what do our banker own g20 politicians say ee need to do? That we must save our banking system and now we need austerity measures like increasing existing taxes and bringing in new taxes cutting our social programs including education and health care stealing from our pension plans while increasing the retirement age. Keeping us working for more years at lower wages while placing our children and grandchildren and debt and servitude for their future lives. We are being lied to that we must go deeper in debt for bailouts stimulus packages quantitative easing saving the too-big-to-fail banks credit easing currency interventions all names that mean the same thing more debt to us.

MONEYFESTO

Is it not strange that the solution that too much debt is always more debt to us and where is all this money going it's going to the banks into the bankers they are stealing our money right now. 1/10 of 1% of the world's population owns two-thirds of the world's wealth this means that 99.99% of the world's population own less than a third of the wealth a decreasing amount because these guys are stealing it. We desperately need to wake up to the banking scam it is time for change to retake control of our money system we must stop supporting the banking scam. The Government should create all the currency and credit needed to satisfy the spending power of government in the buying power of consumers money will cease to be mastered and will then become servant of humanity and the issuing power of money should be taken from the banks and restored to the people to whom it properly belongs it's a pyramid scheme and we, the people are the bottom layers of the banking pyramid. Without our support the banking scam collapses. We have to do it ourselves. wake up get active wake others remove our money from the bank. Imagine that you have a printing press at home that can print money and there is a law that requires the money that you print to be accepted by every person and every business in the country. You could buy multi-million dollar mansions the most expensive luxury cars top-of-the-line clothes Rolex watches yachts private jets and the best of fine artwork all without limit and beyond your wildest dreams.

MONEYFESTO

You could become a famous philanthropist creating programs to help the poor the unemployed and the elderly let that sink in for a minute and explain to me how you would go trillions of dollars into debt you wouldn't why would the thought borrowing money ever cross your mind.

If a group of prominent bankers came to you and said in spite of your good deeds popular opinion is building people fear the unregulated printing of money we are the country's top economists and if you give us your printing press we will give our official endorsement provide the illusion of constraint and gladly lend you any amount of money that you want at a very low interest rate which by the way you never have to repay. Really ! would you trust them ? But that is exactly what we have now the government can print United States notes and spend them which was last done in 1963 but it cannot legally print Federal Reserve notes and spend them.

The Federal Reserve is a private corporation a government-sponsored enterprise and Federal Reserve notes are private corporate bank notes. The Fed effectively owns the printing press and can print or otherwise create any amount of money totally independent of any congressional approval or oversight and in order for the government to borrow more money for its budgetary con game it borrows the money from the Federal Reserve.

MONEYFESTO

The Fed purchases government Treasury bills Treasury notes and Treasury bonds in exchange for its newly created money and then sells the securities on the open market at a huge profit and all of us are stuck with a perpetual interest payments through ever-increasing taxes plus the hidden tax of inflation.

Printing United States notes and spending them without that is however not a good alternative it would still cause inflation which not only hides the real tax rate but also discourages saving and has a destabilizing effect on the economy. In the beginning the Federal Reserve actually had a positive stated objective to prevent runs on banks that got themselves in financial trouble and to even out the business cycle from that noble beginning about 100 years ago the Fed morphed into the entity of absolute power that we have today.

To understand the process we need to look at banking before the Federal Reserve from the beginning a bank was considered a safe place to keep one's money but there was one big difference the gold standard the government did not print money it minted gold and silver coins as the Constitution still requires by the way .

MONEYFESTO

The paper money that existed at the time was printed by each individual bank as a receipt a bank note for the gold and silver deposited with the bank customers were charged a small fee for a safe place to keep their Money. These notes were easier to carry easier to hide and often exchanged for goods and services instead of the actual gold or silver. The bank notes were considered just as valuable as the actual gold or silver because of bank success depended on its spotless reputation If somehow there was an occasion where everyone wanted to take their money out of the bank at the same time how could that possibly cause a problem for depositors. Well imagine that you were a banker back then hundreds of customers have gold in your vault also a loan broker you offered to split the interest received on any goal that customers make available to lend with the interest rate determined by the supply of money made available and the demand for loans all as well but then you notice all of that gold just sitting idly in the vault day after day and then you get a brilliant idea, if you lend jewels gold and don't tell him. You get to keep all of the interest income for yourself if Joe comes in for his gold you can use Paul's gold to cover it. If you don't get too greedy you could actually get away with it. couldn't you ? But there was one big problem that made that very difficult the banker would lend the gold the borrower would spend it and whoever received the gold would likely put it back in the bank, the banker would issue a fresh bank note for the newly received deposit.

MONEYFESTO

But would have no way of knowing that this was the same goal that he had just lent. With the compounding effect of several of these inflationary cycles the Baker would conclude that his business was expanding and that he could take more risk. Also with this newly created money the town would experience an economic boom. However all artificial booms eventually end and the resulting downturn in the economy would make people nervous and want the security of real gold often triggering a run on the bank. With banknotes issued while an excessive deposits the bank would fail and many people would lose all of their Money.

Instead of passing laws against the misappropriation of depositors funds and the making of fraudulent loans the individual state governments completely ignoring the compounding effect passed laws to regulate the process by enforcing a reserve requirement a percentage of the deposits that could not be lent. But because of either incompetence or corruption the reserve requirement averaged a very low 15%.

This is the origin of the fractional reserve system legalized fraud which is the foundation of our present banking system. As a result there were many boom and bust cycles accompanied by bank failures that were falsely blamed on the business cycle.

MONEYFESTO

The Federal Reserve to the rescue to put an end to bank failures. The Fed was given the power to create money and make loans to banks to make up for the shortfall if too many customers wanted to withdraw their money at the same time. They called it providing liquidity since the Federal Reserve was considered part of the United States government runs on the banks were prevented by giving depositors a false sense of security in the banking system. Both the Federal Reserve Act and by no coincidence in my opinion the sixteenth amendment were passed in the seen year 1913. The Federal Reserve Act established a central bank to make loans not only to banks but especially to the federal government and the sixteenth amendment authorizing a federal income tax provided the collateral for those government loans. The Full Faith and Credit of the US taxpayer and forced by the absolute power of the IRS guarantee the loans. However with the gold standard the amount of banknotes circulating in excess of the gold deposits could only go so far if the reserve requirement was 15% the amount of banknotes could only increase to about six times the amount of gold deposited the bankers profits and the resulting inflation would end.

MONEYFESTO

This is an absolute mathematical limit unless the gold standard could be eliminated. With the availability of money and interest rates under the complete control of the Federal Reserve immediately in 1914, the roller coaster ride got underway. Government borrowing from the Fed starting in 1914 to finance World War one increased the money supply 70% causing inflation. In early 1920 the discount interest rate was raised from one point two five percent to six percent to fight the inflation. The money supply went down only eleven percent but unemployment increased to 20 percent. In 1924 the discount interest rate was lowered from six percent to 3 percent to fight the unemployment this along with an easy money policy caused the Roaring Twenties stock market boom people would buy stocks the value of the stocks would increase they would present the stocks as collateral then the bankers would loan them more money to buy more stocks and repeat the process. The money supply increased 60% and the unemployment rate went down to 5%. In 1928 to fight the inflationary boom the discount rate was increased from 3% to 5% followed by tight money policies in 1929, that led to the October 29 1929 stock market crash, the money supply decreased 35% and unemployment increased to 24%.

MONEYFESTO

The resulting Great Depression made possible the New Deal entitlement expansion of government and permanently changed its charter from very limited to totally unlimited. How about that for stabilizing the business cycle the Board of Governors of the Federal Reserve were the top bankers of the time were they that incompetent they failed miserably or did they ?

There was one huge gain for the Federal Reserve that I would like to point out at the bottom of the Great Depression in 1934 gold was made illegal for the public to own. I fail to understand the rationale but a law was passed requiring people to take their gold coins to the bank and exchange them for Federal Reserve notes. People were confused and desperate enough to comply.

The Federal Reserve a private corporation took possession of virtually all of the gold in circulation in the United States at that time this fact is briefly mentioned in history books but it is not reported that it was and still is the biggest gold heist in the history of the human race and it was the first big step in completely eliminating the gold standard. Where is the gold now ? Well we may never know when the Federal Reserve Act was passed in 1913 the law made the Fed exempt from federal state and local taxes in spite of an enormous profit potential and also exempt from audit. Are you getting the sense that there was some chicanery involved here ?

MONEYFESTO

In 1974 President Nixon ended the gold standard and the rest of the world soon followed without a gold-backed currency the Fed and central banks in every other country in the world could create any amount of money without limit reducing the value of the currency for everyone in the process.

Also with a new deal entitlement policy and income tax and no real debt limit the federal government was able to grow to an unimaginable level destroying the middle class increasing poverty and homelessness. Regulating almost every aspect of human action eliminating the right to privacy flexing its military muscle creating enemies all over the world and obligating children to more than a fifty thousand dollar debt as soon as they are born rendering the Pledge of Allegiance totally obscene.

In addition with an unlimited amount of money made available for loans and with saving steadily devalued by inflation one who wants to save money to buy a house car or industrial equipment as used to be the norm is now at a total disadvantage compared to one who borrows the money and makes the payments. The entire economy runs on debt people are given the illusion of ownership of high ticket items only if the banker makes the loan and gets his cut and due to the long-term effects of inflation saving for retirement is only possible by investing the money

MONEYFESTO

That gets us to the absurd economy that we have now the Federal Reserve effectively owns the printing press prints money and makes a huge tax-free profit for every dollar that they print which includes the 17 trillion dollars in national debt. Interest on all of the money lent since 1913, plus all of the other money created and lent into circulation here and all over the World. Without an independent audit the exact total can only be estimated to be at least 30 trillion dollars. That is 300 billion dollars per year on the average each year for past 100 years with that level of pilfering the loss of high-volume manufacturing jobs multiple boom and bust cycles high public and private debt high taxes high inflation and a balance of trade deficit for the past 40 years no economy could be expected to do well. It's a miracle that it has made it this far without total collapse the middle class has been completely destroyed up to 1972 the income distribution was a bell curve a natural distribution showing a strong middle class with a minority of poor and few rich but slowly since then the middle classes disappeared the income distribution even in 2005 at the peak of the real-estate boom before the 2008 crash is nothing like a bell curve it shows more households at or near the poverty level than any other income level.

MONEYFESTO

Homelessness once rare is now commonplace with government spending dominating the economy the connected minority get richer with government jobs government contracts or government bailouts while the middle class is being pushed closer and closer to the poverty level.

The Empire of the United States was conquered without a shot being fired and is still being vigorously plundered. At what point then is the approach of danger to be expected I answer if it ever reach us it must spring up among us it cannot come from abroad if destruction be our lot we must ourselves be its author and finisher as a nation of free men we must live through all time or die by suicide. How do we die by suicide as a nation are we all that apathetic unaware? well it is difficult to be otherwise with the entitlement culture is so well-established and with the media bombarding us with headline rhetoric and misdirection this is the richest country in the world this is a democracy your vote counts support our troops who fight the unending battles for your freedom, every other country is worse off, if you just work harder you can still achieve the American dream, cuts in social programs would spell disaster, income equality tax the rich the problem is corporate greed Automation illegal immigration the minimum wage the Chinese, the Republicans, the Democrats,

MONEYFESTO

the Tea Party the media is biased and has control of the narrative but the Internet can counter the popular media to put an end to this insidious form of economic enslavement here and in virtually every other country in the world the artificial economy of the central bankers by the central bankers and for the central bankers must be replaced by a natural economy, since the central bankers have acquired most of the gold this must be done without gold or gold backing and can actually be done without backing by any commodity and without totally disrupting the present banking system. It is only possible to create economic value in a real sense by completing the cycle of the capital within the production process. Beyond that, the expansion arises in the circulation area is compelled to burst like a balloon to the extent it is not realized by being re-included in the production process and remains within the wicked circle of loan - deposit money.

The period, in which we live, is essentially a period of depreciation or of returning to the real value. It will be impossible for the banking system to create new bank money, and since the banks cannot create money for the jam, they will not be able to grant loans in an uncontrolled manner and the formation of new financial bubbles will be prevented.

MONEYFESTO

As the banks will not be able to make money for the jam, they will shoulder the real sector instead of earning money at the expense of the real sector, and the country's economy will gain value-added and production-based vitality. Since fiduciary money is not created, interest and inflationary pressures will not be the subject and the liquidity risk will be automatically eliminated.

Banks should be the institutions, which do not grant loans against interest to the institutions through the money that created for the jam, become partners to that institution against the fund that they provided through their own resources, and should distribute the profit that they obtained from this to the depositors by supporting the real sector. Like so, they will direct the investors whom they regarded as the shareholders in this respect to favourable investments and will serve the real and reliable growth of the economy.

The bank will be involved in the money generation process by acting as an entrepreneur. In addition to providing funding, banks should also choose a strategic sector in which they will operate, as they will exhibit entrepreneurial behaviour and they should only meet funding requirements from that sector. Thus, the banks will also specialize in the sectors they have chosen and they will reduce the time cost by managing the partnership

MONEYFESTO

In addition to the economic support they provide to the business they partnered, they enable the presence and development of the business by providing consultancy through their expert personnel on the subjects of R&D, advertisement, public relations, technology, marketing and sales.

Buy gold and silver coins get out of debt rip up your credit cards these actions will bring down the banking scam only vote for politicians to support debt-free money or run for office yourself and turn off mainstream media to search for the truth while you still can and support every effort to end the Reserve System and all the privately-owned central banks. Let's bring these criminals to justice to get our money and our countries back.

ADVANTAGES OF BLOCKCHAIN AT BANKING SYSTEM

Banking system is inefficient in its current state as it requires the use of multiple third-party verifications and transferring services in order to complete a transaction. Blockchain can alleviate the need for these organizations and provide the world with a viable solution to the inherent problems facing the banking community. Blockchain is transforming the way in which we conduct business globally by offering us the ability to perform transactions securely in a peer-to-peer manner without the need of any middleman.

The current state of the global banking system is shabby at best. We've already witnessed multiple government bailouts to date and it is exactly this type of pompous behavior that spawned the birth of cryptocurrencies nine years prior. Satoshi, the unknown creator of Bitcoin, was even kind enough to let us know that this was his motivation by leaving a reference to the bailout headlines from the London Times embedded in BTC's genesis block – The Times 03/Jan/2009 Chancellor on brink of second bailout for banks. To understand the advantages that blockchain has over the current banking system, you need to understand the history of banking. Banks evolved out of the need to securely store gold. The first "banker" was nothing more than a gold depository for wealthy people. Individuals would drop off their gold and the banker would then issue them a receipt that could be used to purchase items around town.

ADVANTAGES OF BLOCKCHAIN AT BANKING SYSTEM

Eventually, the banker realized that the people never all came for their gold at the same time and so he decided to start lending out other people's gold at a slight mark up or interest rate. The people eventually became suspicious of the banker's quickly expanding wealth and one night the banker was cornered by a furious crowd who accused him of spending their gold. They forced the banker to take them to his vault and show them that he had everyone's gold. He gladly obliged as he not only had all of their gold but he now had the interest he made in profit as well. After realizing what the banker had done, the wealthy individuals demanded in on the action. This is why banks now have to pay you a small interest on your holdings as well.

Not much has changed since then in regards to the purpose of banks; It's still a third-party organization looking to make a profit off of holding your funds Today, none of these steps are necessary thanks to blockchain technology. Technology has advanced and it is time for our banking systems to do the same. The world cannot continue to bail out fraudulent bankers or run on a fiat-based financial system. Let's take a moment to see how blockchain technology could eliminate much of these banking problems in the coming years.

ADVANTAGES OF BLOCKCHAIN AT BANKING SYSTEM

The words peer-to-peer has no use in the current central banking system that relies on a combination of verifications and monitoring platforms to ensure your funds are sent. Every time you swipe your debit card there are around thirty separate third-party organizations that must coordinate to complete your transaction.

Your bank must first check your balance, verify that it is you actually spending the funds, notify the account where the funds are going to ensure it is correct, interact with the merchant processing firms involved, interact with VISA or MC, and the list goes on. This is why you can spend your debit card funds quickly but any refunds can take a week or longer to be processed. Cryptocurrencies eliminate this need for third-party verification. The transparent nature of blockchain technology makes it perfectly suited for financial services. An individual can check any wallet on the blockchain to ensure funds are present and once they are sent, they go directly to the other individual involved in the transaction.

Have you ever tried to send a large amount of money internationally? It is a nightmare that can take days to complete depending on the amount you decide to send. During this layover, your funds are inaccessible to both you and the other party involved in the transaction. It is common to wait over a week for a large transaction to complete.

ADVANTAGES OF BLOCKCHAIN AT BANKING SYSTEM

Blockchain technology eliminates the need to wait and regardless of the amount of crypto you are sending, the transfer time is the same. This is a huge advantage that crypto has over the current banking system. Imagine that you are a large international company that must send millions of dollars in capital internationally. Blockchain technology would allow you to accomplish this task with unmatched simplicity.

There would be no additional delays and the funds would be more secure than any other form of money transference currently available. You also avoid any losses from converting your funds between countries. Records stored on a blockchain are immutable and easily traceable.

Nobody can hack this data and it is easy to search for a single transaction. Integrating a blockchain-based system would allow banks to quickly handle common issues such as identity theft or disputed transactions. Some banks are starting to explore this option and it can be expected that many more will follow suit in the coming months as the technology continues to see adoption. The transparent nature of the blockchain eliminates the need for credit bureaus.

ADVANTAGES OF BLOCKCHAIN AT BANKING SYSTEM

A blockchain-based system would allow for anyone to quickly see their financial history and thereby prove their ability to repay a debt. Blockchain technology is light years ahead of the current banking system in terms of security.

The redundant nature of the protocol ensures that your funds are safe and allows you the ability to store your funds personally. The advantages of blockchain technology are unmistakable and for the first time in history, a global decentralized economy is a reality.

This is exactly why the central banking system has been so vocal on their opposition towards cryptocurrencies such as Bitcoin. You can expect to see this aggressive rhetoric continue as the banking system continues to go through their identity crisis but in the end, its just math and efficiency will always win out.

WHAT IS ALMEELA ?

Most of the crypto currencies have been far better stores a value than fiat currencies during the few years that they have existed. However, they are so speculative in price that they cannot be used as units of account. Most goods continue to be priced in fiat money. Gold is so valuable that it cannot be subdivided into small enough parts for use in everyday transactions. Most transactions today are conducted digitally, and physical gold cannot be used directly. The only solution of this problem is a crypto currency which is backed by gold and could be divided into decimals.

The Almeela token is a blockchain-based decentralized funding platform(Almee Up) for high tech projects that is backed by physical gold. Almeela is based on the Ethereum blockchain protocol which is secure, and cost effective way to utilise gold as an asset. It enables the transformation of physical gold into a modern digital asset, making it the perfect medium to record and transfer ownership by using smart contract. Its being indexed to gold also guarantees that the price stays above a certain level.

WHAT IS ALMEELA ?

The Almeela is designed to be used as a generally accepted electronic payment means for all who consider gold as a traditional, true, secure and value-stable medium. Gold that can be digitally traded. So the gold return to our real life again. You'll have full ownership of your gold and it will be stored in our gold refinery. Investors will be able to trade Almeela with real-time pricing 24/7, 365 days a year, by using our mobile wallet. Almeela is the best alternative way to invest in and trade physical gold. On this count, Almeela's value is determined not by speculative price movements but by supply and demand on the market.

The Almeela. Therefore, it is safe, cost-efficient and fast, and allows for The Almeela can be transferred borderless, cost-efficiently, securely and in real-time. Its value is predictable because the value of gold has a long tradition, and everybody has an idea about its stability. Therefore, the Almeela can become generally accepted.

ECOSYSTEM OF ALMEELA

The Almeela Ecosystem has been designed specifically for people to be able to monitor, trade, invest and spend their various types of cryptocurrencies fast, effectively and with ease. The Ecosystem is providing professional-standard and user-friendly investment tools, which enable them to make informed cryptocurrency investment decisions.

PROBLEMS

The value of paper money is only the value of paper and ink. It is called fiat money. Namely, the value on paper money is an existing value as only the government or laws say so, Banks are able to give loans to people by creating the Money out of thin air and it does not backed by any gold. Most of the crypto currencies have been far better stores a value than fiat currencies during the few years that they have existed. However, they are so speculative in price that they cannot be used as units of account. Most goods continue to be priced in fiat money. Gold is so valuable that it cannot be subdivided into small enough parts for use in everyday transactions.

PROBLEMS

The idea is that the most valuable fruit of the mind. Human History has developed with ideas and today's technology has come up with ideas. In nowadays the people who have ideas or projects go to the bank when they need for resources. But banks evaluate the credibility of the person, not evaluating their the ideas. Even if the credibility of the project owner is sufficient, the projects income can not able to pay the project owner's credit in time. Due to the time cost of the marketing process, the profit rate is very low.

SOLUTIONS

ALMEEPAY

Almeedex

Almeedex is a crypto currency exchange platform with easy user interface and traditional desktop, mobile applications that enables to exchange of the cryptocurrency without using fiat money thanks to its "Augmented Reality Technology". Almeedex; will let people to use cryptocurrency in our daily commercial life and allow the crpto tokens to be bought and sold in a safe and secure way, without the fiat money. When we look at the recent structure of the crptocurrency exchanges, we see that the exchanges which are using fiat money are only used as a currency exchange by traders, and they only convert their crypto money to the fiat money. Coinmarketcap -the most popular crypto database - When we look at the top 10 international cryptocurrency exchanges, it is seen that there is no fiat money exchanges in their structures . Almeedex ; It is the follower and the supporter of this structure which is in compliance with the starting philosophy of block chain technology. The only way to service to all global world than domestic is to be cryptocurrencny which can be exchanged and trasfered without any fiat money. Almeela software team, in both local and international field, has developed pioneering project with 'Augmented Reality Technology'. The software team will combine its knowledge and experience to the Almeedex Cryptocurrency Exchange Platform, with aim to be first in the world. Thanks to "Augmented Reality Technology" investors to proceed trades quickly and it will be very easyto collect the most accurate information.

PROBLEMS& SOLUTION

Technological insufficiency

Nowadays Cryptocurrency market reached to billions of usd volume of billions of usd. So entrepreneurs are willing to enter this market by developing their Technologies in order to get a share in this cake . While developing of the cryptocurrency market, cryptocurrency exchange platforms are being created fast in different countries . Even if a well-crafted software had been undertaken by qualified developers, due to inexperience of the current exchange team, platforms while they are growing, become insufficient day by day and unsecure to its investors. Almeedex team consists of experts . Not only with software experts, at the same time team Financial Experts, Marketing Managers, Advertising Specialist and Business Development Managers coming together under Almeedex business. Whilst it is a new generation exchange, it offers to investors innovative solutions parallel with the developing technology

PROBLEMS & SOLUTION

Customer Services

Cryptocurrency exchange works on 24/7 basis and allows worldwide people to trade. Most of the investors complaints as lack of customer service due to the local time differneces, even there is an asnwer it is just an automatic computer software. The speed of the customer service to questions and the urgent solutions to the problems are very critical in the management of customer relations. Unfortunately, in many crypto money exchanges, customer questions, problems and complaints are answered very late; whilst one second in exchange is very important, problems cannot be solved for hours and maybe days.

Customer satisfaction is rate after covering the customer's needs and fulfilling his / her demands. It can also be defined as the level of customer satisfaction with the services it receives. In order to maintain competitiveness, organizations need to manage customer relations effectively . Companies should manage their customer services to be intensive in competition. In such a dynamic environment, companies need to understand, meet or even exceed the expectations of existing and potential customers in order to be successful. Almeedex Customer Service aims to provide life time basis customer satisfaction to establish and manage strategic relations with . Our customer service will work 7/24, and to answer clients in the fastest and effective way. Almeedex customer relationship management is monitored statistically. Turnaroun t times to the requests are on the world quality standards.

Security

Many cryptocurrency exchanges are hacked by cyber attacks due to security vulnerabilities . Almeedex is built to the highest standards and has undergone all safety tests, including penetration testing. The Almeedex security team has high industry experience in financial security systems .

- Ddos Protection
- 2-step Protection for Entry and Shooting operations
- Cold Wallet Protection
- Audit of intelligent contracts
- 24/7 Cyber Security Audit
- IP White Listing
- Anti- Pishing warning system
- 2FA security support

PROBLEMS & SOLUTION

Poor Market Liquidity

Market liquidity is the most important factor for both professional and new investors. Weakness of liquidity in exchanges, occurs serious gaps between price margins . These gaps cause losses to the investors. This weakness of the market liquidity causes to the companies, professional investors, market makers and even new investors to stay away from the exchange markets .

Almeedex Cryptocurrency Exchange has an qualified financial team experienced. This team uses own experience with the logic of the market maker . The Almeedex team works parallel with the international accredited cryptocurrency exchanges around the world and gets support when requested from these exchanges in order to provide liquidity. Makes a solution partnership with professional market makers and ensures that the market liquidity is world-class. Makes a simultaneous price analysis with the market and balances the general level of prices with its own algorithm .

PROBLEMS & SOLUTION

Language Support

Block chain is a technology that aims to eliminate global boundaries. Cryptocurrency Exchange operates on a 24/7 basis and enables people to trade worldwide. The main deficiency in many exchanges is language support.

Almeedex has 7/24 Chinese, Russian, Turkish and English language support.

High Commissions

The most basic income of the cryptocurrency exchanges is trading commissions and transfers. Many cryptocurrency exchange sets high commission rates to make a higher profit from these transactions, which has a diminishing effect on the investor's income.

Almeedex not only makes a technological revolution, but also carries out a financial revolution. Every investor with a certain amount of ADX in their own account of the Almeedex Cryptocurrency exchange trades

PROBLEMS & SOLUTION

Weak Advertising

Advertisement; It is the communication between the target audience and the advertiser through the media. It forms the media where both sides shares each other's thoughts, perceptions, desires and goals. Firms try to make room for themselves by using the attention, attention and perception of the target audience.

One of the clearest mistakes made by today's crypto exchanges is that they can start advertising activities without correctly identifying the target audience, and the result of the advertisement is not getting back effectively.

The target audience ensures to the firms which are advertising their products, the requested features. It changes the structure of both the advertiser, the product and the service, ensures their development and ensures firms to be brand. Increasing the market share creates new jobs, new business areas. Almeedex team

PROBLEMS & SOLUTION

Lack of Community

The biggest challenge encountered in the new formation, especially for the new established cryptocurrency exchanges, is to create communities that feel belonging to the project. The social media accounts of inorganic community formations cause serious problems in the development of the project both in the short term and in the long term. The low interaction rate of the shares made on social media gives serious damages to the brand value of the project. There is possibility of being rejected from blockchain community because of this groups.

Almeedex Crptocurrency exchange is a project which is developed by Almeela Token team –which is first listed in the international cryptocurrency exchanges in Turkey.. With the support of the current community of the Almeela team, Almeedex will be a prominent project to reach the target audience very easily. Almeela's Advertising, Marketing and Social Media team will work for Almeedex and share own knowledge, experience for Almeedex.

CRYPTO CURRENCY EXCHANGE PLATFORM

ALMEEDEX

Almeedex is a crypto currency exchange platform with easy user interface and traditional desktop, mobile applications that enables to exchange of the cryptocurrency without using fiat money thanks to its "Augmented Reality Technology".

CRYPTO CURRENCY EXCHANGE PLATFORM

ALMEEDEX

Our goal is to be the next-generation crypto currency exchange platform in blockchain technology which offers unique solutions to users. The Almeedex team has big experience in working with global investors in the financial field. This experience has taught us how to use the best platform in the best way through an investor's eye. Almeedex present you the blockchain technology with our knowledge and long experience.

We define our development strategy based on empirically acquired information and analysis of the existing platforms. ALMEEDEX platform has faced many challenges, and thanks again to our expert team's efforts, we solved all technological difficulties during development period. As a result it enables us to own secure platform which meets modern market requirements and high technological speed standards. Almeela software team has developed lead projects with 'Augmented Reality Technology' in both domestic and international markets. Experts in Almeedex will combine own knowledge and experience to the Almeedex Cryptocurrency Exchange Platform, to be first in the world. Thanks to "Augmented Reality Technology" investors can proceed trades quickly and it will be easy and quicky to collect accurate information.

CRYPTO CURRENCY EXCHANGE PLATFORM

ALMEEDEX

When we check the other crypto-currency exchanges, we see that the majority is only profit oriented but not quality base oriented. Due to the short-term profit targets, such projects can not create a long term innovative vision

The ultimate aim of the Almeedex team is to keep the crypto money exchange in contact with everyday life of the people. Especially As Facebook and Apples invested seriously to "Augmented Reality Technology", Almeedek combines blockchain technology with Augmented Reality Technology.

CRYPTO CURRENCY EXCHANGE PLATFORM

ALMEEDEX AR

Augmented reality takes our reality and adds something on it. From social media filters to surgical procedures which can be used in different field will help to improve our ability to see, hear and feel and it gives opportunity to present it to wider audience. Augmented Reality can provide unprecedented benefits and entertainment in the digital world, as well as being one of the leading technologies in the construction of future smart homes, cars or even factories. Augmented Reality will adapt well to our lives in a few years. For example, when we are on a street, we will direct our camera to the apartment buildings and look at which house is for rent or for sale, we will be able to scan a restaurant with AR application and read reviews about the food. In factories and workplaces, the technicians will have to go through the machines with the tablet computer in their hands while checking the equipment. We will be able to see how many meters is in the nearest pharmacy. Briefly, in our pocket, in our hands and eyes will go beyond just being an image, and one day our windows and mirrors in our homes and offices will be transformed into an Augmented Reality panel.

ALMEEDEX AR

Companies like Wells Fargo, Citibank, Mastercard are investing in augmented reality technology. They find solutions to customers in the field of finance and payment systems. AR is the newest and most useful step in the financial sector. AR is a revolution in financial technology. If financial institutions want to increase their competitiveness in the developing and changing world, it is imperative to switch to AR technology and invest in this technology. Almeedex's future-oriented vision is to use "Augmented Reality Technology" to make a revolution in crypto money exchanges. Bringing this new technology to investors will be the first in the world. Apple, one of the giant of the industry, has highlighted the AR kit in its new products, while Microsoft shows its support clearly with the Hololens investment in their technology. While the Augmented Reality Applications are developed in all sectors, our first priority is to develop a crypto currency exchange platform that can integrate with these sectors and make a revolution in finance.

ALMEEDEX AR

BENEFITS OF AUGMENTED REALITY TECHNOLOGY

- Provides quick access to information
- Allows you to interact with the platform on every moment of your daily life
- Recovers users from hardware through cloud access
- Easy to understand complex data and increases the speed of decision making.
- Provides one-to-one interaction in the Customer Service experience
- Ensures more efficient and faster use of exchange platforms
- The user designs the crypto currency exchange platform according to his own experience

İlerleyen süreçte yeni kripto Paralar eklenmeye devam edecektir. İlk etapta yüksek kredibilitesi ve likiditesi olan paralar tercih edilmiştir.

- BTC
- ETH
- KZE
- NPXS
- USDT
- ALX (Almeedex Token)

ALMEELA FUNDING PLATFORM

AlmeeUp

The idea is that the most valuable fruit of the mind. Human History has developed with ideas and today's technology has come up with ideas. In nowadays the people who have ideas or projects go to the bank when they need for resources. But banks evaluate the credibility of the person, not evaluating their the ideas. Even if the credibility of the project owner is sufficient, the projects income can not able to pay the project owner's credit in time. Due to the time cost of the marketing process, the profit rate is very low. Banks should be the institutions, which do not grant loans against interest to the institutions through the money that created for the jam, become partners to that institution against the fund that they provided through their own resources, and should distribute the profit that they obtained from this to the depositors by supporting the real sector. Like so, they will direct the investors whom they regarded as the shareholders in this respect to favourable investments and will serve the real and reliable growth of the economy. The bank will be involved in the money generation process by acting as an entrepreneur. In addition to providing funding, banks should also choose a strategic sector (like high tech sector that almeela choose) in which they will operate, as they will exhibit entrepreneurial behaviour and they should only meet funding requirements from that sector. Thus, the banks will also specialize in the sectors they have chosen and they will reduce the time cost by managing the partnership process more efectively and quickly. It is also inevitable for changing of banking system at developing world.

ALMEELA FUNDING PLATFORM

AlmeeUp

In addition to the privileges provided by the blockchain, it is also important to change the banking philosophy. Instead of uncontrolled Money supply, credits and financial bubbles, A new interest-free banking system in which the value of money is determined by supply and demand is only possible with the existence of blockchain technology. Entrepreneurial spirit is one of the most powerful driving forces in business which brings a positive contribution to both economies and societies. Many people wish to start their own company and become an entrepreneur but consider it out of their reach. Although they have keen and bright ideas, they may lack the resources and funds required to successfully transform those ideas into actual projects. And that's where ICOs come in. An ICO proved to be a remarkable alternative and transparent tool in supporting projects with the use of blockchain technology. With blockchain technology you have been given the opportunity to carry out financial transactions yourself, with more reliability than a bank can ever give you. That is why many tens of millions of people worldwide are already attracted to ICOs and cryptocurrencies. Blockchain technology is used mainly in the financial and tech world, but this is just a glitch of the true potential. In the near future, industries like healthcare, judicial or transportation will experience a lot of changes.

ALMEELA FUNDING PLATFORM

AlmeeUp

The Almeela is a blockchain-based decentralized funding platform which gives startup budget for high tech projects with its own equity and become a partner with the Project it fund. We are evaluating the credibility of individuals or entities that are seeking funds according to the applicability of the idea, not to the past credit payment performance. For us, the idea owners are not only customers but are also our travel companions. One of the most important factors in the increase of interest rates in the countries is the current account deficit. The demand for importation of high technology products it is one of the main reasons for the current account deficit.

The current balance will be achieved when these products are exported, while the production of advanced technology products by the countries through their national capital will make the effect causing the reduction of current account deficit.

If it is a country without any current account deficit then it will not be obliged to borrow, and its dependence on the existing banking system will be reduced.

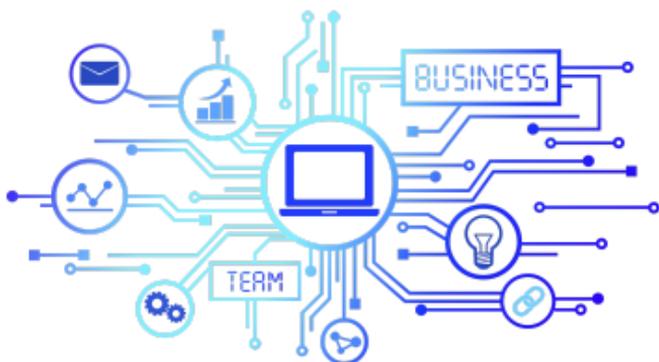

Almeep

The system we have developed enables the creation of crypto stocks and the rapid access of investors all over the world. A platform where crypto stocks operate in a decentralized market Will be the first phase of future capital market.

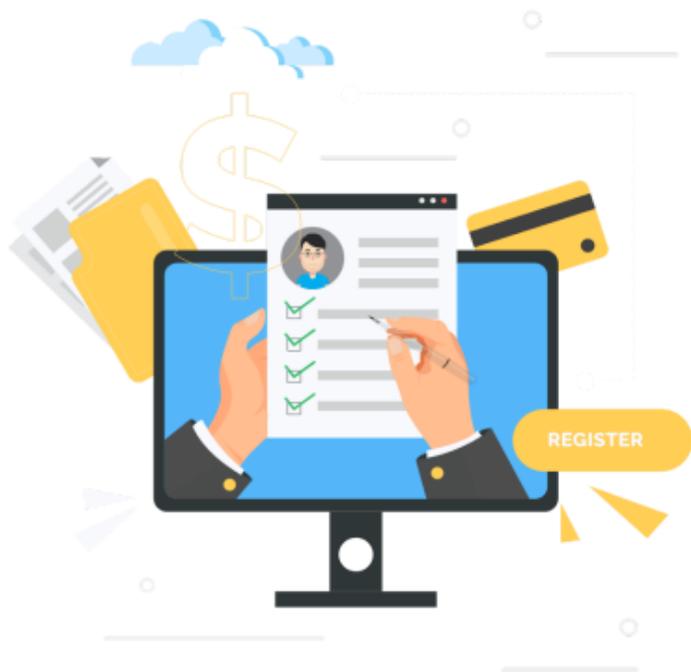

Almeep Workflow

The Almeep is a funding platform Which gives startup budget for hightech projects with its own equityand become a partner with the Project it fund.

Almeeup Workflow

Project owner registers to provide funding at Almeeup funding Platform

designed by  freepik

Almeeup Workflow

The project is evaluated by our expert teams,

Almeeup Workflow

If the project is considered appropriate, Almeeup representatives make an online interview with the project owner.

Almeep Workflow

AFTER THE INTERVIEW, PROJECT THAT WILL BE SUITABLE IS EVALUATED BY ALMEEUP BOARD OF DIRECTOR.

Almeep Workflow

IF THE PROJECT IS SUITABLE, contract made between project owner and Almeela LTD .

Almeep Workflow

Almeela LTD, gives startup budget for high tech projects with its own equity and become a partner with the Project it funds.

Almeep Workflow

After giving startup budget, the ICO process is initiated for the project established with the support of Almeela. In this Process, support is obtained from the technological sub-structure and experience of Almeela Funding Platform

Almeep Workflow

The Projects offer their crypto shares to the public through the ICO process at Almeela Funding Platform

Almeeup Workflow

Investors, who have crypto stocks in their hands, receive their share of the profits earned by the Projects periodically as a crypto currencies

DIFFERENCES BETWEEN USUAL BANKING AND ALMEELA

The value of paper money is only the value of paper and ink. It is called Fiat (nominal money). Namely, the value on paper money is an existing value as only the government or laws say so, and it does not backed by any gold. Value of Almeela Token is backed by gold. It takes power from global decentralized economy, not from government's so called laws. Banks are able to give loans to people by creating the money out of thin air. Almeela involved in the Money generation process by acting as an entrepreneur. Never gives loans and never wants interest. Almeela funding the projects with its own equity and become a partner of the project.

When the banks lose their lending ability, the artificial system that allows the credit wheel to spin is clogged and the financial crises are artificially revealed by the banks again. Almeela does not focused on lending, The only goal of Almeela is income profit sharing and brings money back to real sector and to the public who is the real owner of money. Money is debt and debt is money and don't forget the interest charges money equals debt and debt equals slavery therefore money equals slavery. Almeela's main goal is interest free banking. Therefore with no interest, slavery turns into pure freedom.

DIFFERENCES BETWEEN USUAL BANKING AND ALMEELA

Banks are printing Money out of nothing, out of thin air; there is not enough money in existence for all of us to make our interest payments. Infact our money creation system is even mathematically impossible, money issued by the bank's principal that does not equal the money demanded back to the bank's principal plus interest. In Almeela's ecosystem; money supply is fixed and the money is backed by gold and equals to circulation supply. Interest rate never included in the calculation of Money supply. People think inflation is prices and costs increase or the value of our money always goes down inflation is created every time the Bank's print money which is every day. where does all this new money get its value? The answer is it steals its value from the existing money supply where our savings are.

Our savings are disappearing because of the new money they're printing. The main solution of inflation is controlling the Money supply. If money creation was imbalanced with goods and services, there would be no inflation At Almeela's ecosystem money supply can be checked by investors on line. Only the supply demand balance sets the value of the money The people who have ideas or projects go to the bank when they need for resources. But banks evaluate the credibility of the person, not evaluating their the ideas.

ALMEELA'S PLAN IS TO CLEAR OFF ALL BANKS AT FINANCIAL SYSTEM

For recovering the worth of money and revaluation, Let's give a chance to money for making its NATURAL SELECTION. In your opinion will it prefer to be a piece of paper or a gold? Of course; the answer is Gold. In the future if money will select its nature again, we will follow the footprints of it.

For a better world where no interests, economic crises, inflations, unfair earnings, labor exploitations, poverties, debts and suicides does not exist. Make your own choice! Making money at financial system is 0 balanced transactions. If someone is making money that means some people is losing money. Unless the money returns as a real sector investment, banks enriched by making you a debt slave and you will continue to lose money. We desperately need to wake up to the banking scam it is time for change to retake control of our money system we must stop supporting the banking scam, unlimited amount of money made available for loans. As a conclusion; it is also inevitable for changing of banking system at developing world

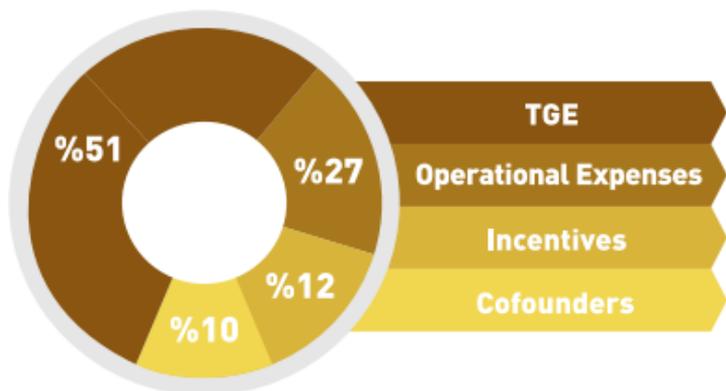

. In addition to the privileges provided by the blockchain, it is also important to change the banking philosophy. Instead of uncontrolled Money supply, credits and financial bubbles, A new interest-free banking system in which the value of money is determined by supply and demand is only possible with the existence of blockchain technology. The system we have developed enables the creation of gold bankings and the rapid access of investors all over the world. A platform where crypto golds operate in a decentralized market is the first phase of future banking system.

TOKEN GENERATION EVENT

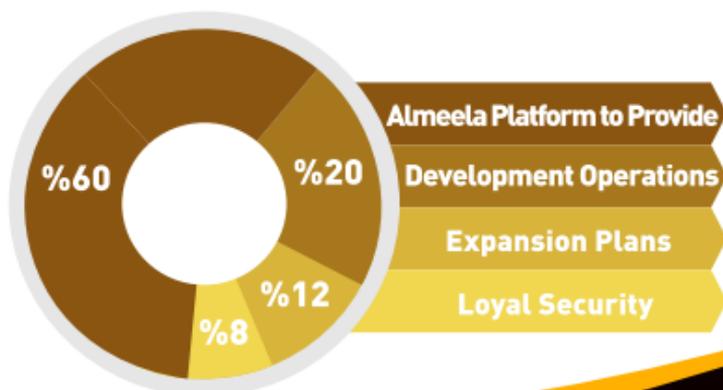

The Almeela crowd sale and corresponding token creation process will be managed by ALMEE Software LTD, limited liability company in Turkey, and will be organized through Ethereum smart contracts. The company that will own and operate the platform will be established in Estonia. During the pre-sale phase, participants willing to support the development of the Almeela Project may send BTC or ETH to the designated addresses. By doing so, they are purchasing Almeela Tokens at a more favorable and lower Cryptocurrency exchange rate than the participants who send their contributions once the crowdsale is live. The Almeela tokens will be distributed once the crowdsale ends via smart contract to their wallets. After the TGE process is complete, the Almeela tokens might be available on the secondary markets (for residents of countries where the purchase of tokens does not violate laws), gain access to new products, or sell them to interested traders, analysts, or funds. 51 % of the Tokens will be allocated for the Token Sale and will be distributed to the Community. 10 % of the Tokens will be allocated for the Cofounders and Advisors and lock period. 12% of the Tokens will be allocated for the Marketing
